

MecWash 'Solo' used Industrial Aqueous Parts Washing Machine FOR SALE

Used in the Aerospace, Automotive, Defence, General Engineering and Medical industries, MecWash machines achieve high cleanliness standards for components with complex geometries, difficult substrates or tenacious contaminants.

The rotational family of parts washers support the complete range of engineering processes, including machined castings, forgings, turned parts, pressings, extrusions and mouldings.

M406 is a High Volume Spray Wash machine that has been maintained to an exceptional standard. It is available now at a fraction of its new price.

Features

- Wash chamber: 400mm x 450mm x 600mm
- Maximum load weight: 100 kg
- Automatic wash chamber door
- User programmable wash cycles
- Variable speed basket rotation
- High Volume Heated spray wash
- Rotational Hot Air air dry
- 500µm mesh strainer baskets
- Oil skimmer
- In-line solution filters
- Chemical dosing pumps
- Overall size: 1275W * 1445D * 2300H
- Power rating 3Ph 80A 400V

Description

Built in 2005 by MecWash Systems M406 has spent a lot of its life in standby, consequently, it is in near perfect 'as new condition' and required no refurbishment when it came into our stock. It has a small footprint and would be equally at home in a production cell or jobbing machine shop. Fitted with a single stage wash tank it uses high volumes of filtered water based wash solutions to quickly remove contaminants followed by a Hot air dry cycle. Cycle times are easily adjusted from 2 to 100 minutes.

The rotating wash drum ensures that the parts are exposed on all sides to the high flow wash solutions.

A belt oil skimmer is fitted to the wash solution tank whilst the wash tank to remove machining oils and maintain optimum performance.

Why buy equipment 'off plan' when you could be testing and proving your parts in proven plant tomorrow at a fraction of the cost of new?

Our full refurbishment program includes:

- Frame and all covers stripped and painted
- All stainless wetted parts stripped and cleaned
- New drum and door seals
- Pumps stripped cleaned and re-sealed
- Pneumatics cleaned re-sealed and re-piped as necessary
